

Environmental Policy

The Club is a social organisation established to bring together people who are interested in recreational four wheel driving. Recreational driving can have an impact on soil erosion, air and water pollution, destruction of natural habitat, the loss of vegetation, and therefore the reduction of native and exotic fauna.

The Club is therefore committed to minimising and reducing its environmental impact and pollution, with the establishment of a policy of minimisation, and by incorporating environmentally friendly practices for off-road driving. The practices will be reviewed and revised on a regular basis by the Club Committee and followed by its members, where-ever possible, with a view to continually reduce environmental damage.

The practices implemented will be in line with Local, State and Federal regulations or legislation.

We will meet the commitment by the following guidelines:

- Provide education and information to our members of environmentally friendly practices, covering good camping codes on private and public land.
- Provide driver education for not only the correct and safe way to drive their 4WD, but also how to drive off-road in an environmentally safe manner.
- Instill an attitude of good vehicle maintenance. A well maintained vehicle is a more environmentally friendly vehicle.
- Provide information, through the Club's library, of National Parks and other areas of interest and beauty, to provide incentive to members to look after their environment.
- Provide information, as it becomes available, of environmentally friendly practices, and publish them in the Club's monthly magazine.

This policy is to be available to all Club members and associates for their input and review as necessary.
